

## Peak Energy Rewards is now Flex Smart+

Peak Energy Rewards is now Flex Smart+, and we're offering an extra \$75 for signing up before Dec. 31. Additionally, you'll receive \$75 per device for enrolling Nest or ecobee thermostats and \$30 per device for enrolling Mysa or Sinopé thermostats, plus more for staying enrolled. You'll also be eligible for exclusive savings on energy-efficient home upgrades, such as heat pumps, water heaters and windows!

### What's Flex Smart+?

Flex Smart+ is a voluntary energy-efficiency pilot program for residential customers on Bainbridge Island who heat with electricity.

We launched this program in November 2022 to reduce the need for more new infrastructure by using smart technology to help meet Bainbridge Island's growing energy needs, and that goal remains the same. Your participation will also help us reach our goal of providing 100% carbon-free electricity by 2045.

## How do I join?

You can join by enrolling a Google Nest, ecobee, Mysa or Sinopé smart thermostat. If you don't have a qualifying smart thermostat, you can get one installed through the program with up to a \$350 rebate to help cover costs.

Once enrolled, PSE will occasionally adjust your energy usage on especially cold days, or "flex events," to prevent spikes in energy usage. During a cold snap, for example, we'll lower your temperature set point by a few degrees and possibly raise it ahead of time. You can always opt out of an event by manually adjusting your thermostat.

By shifting when you use electricity and using less, you help ensure that everyone has access to energy when they need it most, and you'll help us shift energy usage to match the availability of renewable sources like wind and solar.

**You can make a difference!**

Participate in Flex Smart+ and help meet Bainbridge Island's energy needs
